Diagonal Belt Cleaner

MATO Diagonal Cleaners

MATO Products supplies the complete range of MATO conveyor belt cleaners for the materials handling and mineral processing industries.

MATO diagonal cleaners can be used for plant and underground applications. MATO diagonal cleaners are ideal for use in the protection of tail or return pulleys. They come with a self-adjusting system designed for fast and easy blade changes.

EFFICIENT performance

- MATO belt cleaning systems ensure the blade is always in contact with the belt.
- Spillage is removed from the inside of the belt.
- MATO diagonal cleaners come with a 6-month construction and installation warranty.

SAVE money

- The life expectancy of the blades is 10 months or more depending on the application.
- MATO diagonal cleaners require minimum investment with a maximum lifespan.

PROTECT your equipment

- MATO diagonal cleaners are designed to protect tail pulleys and their lagging.
- MATO tail end cleaners include stop limits to prevent metal scraping the belt cover.

REDUCE downtime

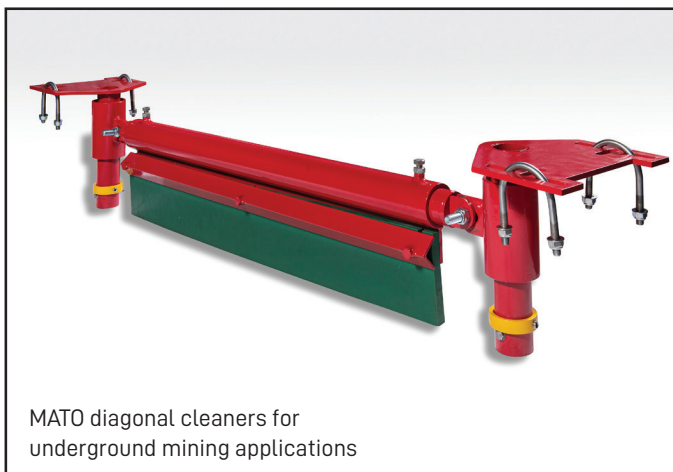

- MATO diagonal blade height-stopper act as a safety wear indicator ensuring on-time blade replacement.
- MATO diagonal cleaners are installed diagonally across the conveyor belt, to ensure that the discharged material is channeled to only one-side of the structure for ease of cleaning.
- The quick-change polyurethane 90-shore hardness blade reduces maintenance downtime.

CUSTOMISED solutions

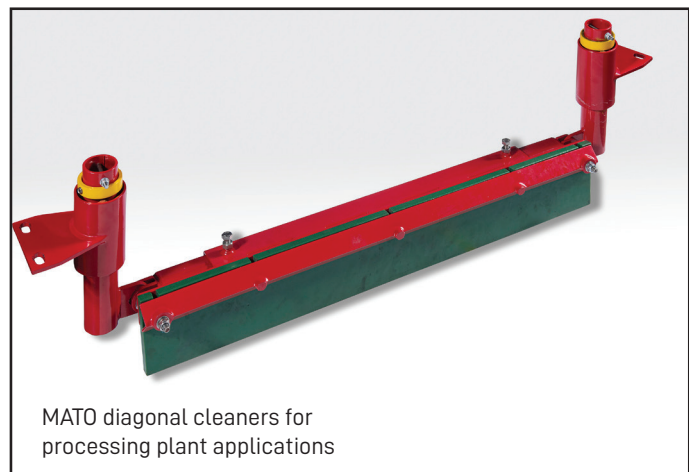

- Mounting brackets can be customised based on assessment of plant conveyor structure.
- MATO diagonal cleaners are easy to install.
- MATO diagonal cleaners are constructed from mild steel with collapsible end-assemblies for ease of extension.
- The MATO diagonal cleaner range is fully produced in South Africa and is adapted to the harshest African conditions.

APPLICATIONS

- MATO diagonal cleaners are reliable and robust, ready to deal with any materials escaping to the inside of the conveyor belt.
- MATO diagonal cleaners can be installed at all transfer points and tail end units.
- Customised for processing plant and underground applications.
